

July 16th, 2025

Dear Customer,

We want to inform you about a general update in how the Country of Origin (CoO) is displayed for some Vishay products. Please note, this is only for informational purposes, may not impact all customers, and does not represent a formal Product Change Notification (PCN), as there have been no physical, process, or location modifications to any products.

No Physical, Process, or Location Changes

We want to emphasize that products continue to be manufactured at the same locations, using the same equipment, materials, packaging, and process steps as before. There have been no changes to any aspect of the production process or sites involved.

Background

This alignment is part of a global initiative at Vishay to ensure consistent representation of CoO information across all divisions, based on international and national regulations, as well as World Trade Organization guidelines.

Please Note

Some customers may have already noticed changes in the CoO information on documentation accompanying recent product deliveries. As part of this ongoing initiative, updates to the CoO may continue to appear over time in product documentation, where applicable. These changes align with the updated approach and do not reflect any physical changes to the products themselves.

Next Steps

For customers potentially affected by the new CoO classification, a separate communication with specific part numbers will be sent out at a later time.

If you have any questions, please reach out to your local Vishay sales manager or customer experience contact. We appreciate your understanding and your continued trust in Vishay.

Best Regards,

A handwritten signature in cursive script, appearing to read "Anne Taylor".
