

Change Notice - Series 221

Dear Sir or Madam,

With this letter, we are informing you of a change to the shape of the "lever-operated terminal blocks" from Series 221, 4 mm², part numbers 221-4x2, 221-4x3, and 221-4x5.

Reason for the change:

As part of a new tooling technology for the Series 221 cover, which is more material-efficient than the previously used technology, there will be new injection points on the cover.

Over the next few years, the old covers will be gradually replaced by the new ones. This may lead to some mixing of the old and new parts.

This barely noticeable change will have a positive impact on material usage.

Mold Change:

New

Injection Points:

- 221-4x2: 1x centered
- 221-4x3, 221-4x5: symmetrically positioned to the left and right of center

Old

Injection Points:

- 221-4x2, 221-4x3, 221-4x5: 1x centered

Affected Items:

All 4 mm² terminals with part number **221-4xx** are affected.

The part numbers remain unchanged.

Technical Data and Approval:

The technical data of the 221 series terminals remain unchanged.

The certification data is identical, and the certifications remain valid.

Change Period:

The covers with the new injection points for part number 221-4x3 will be distributed starting in November 2025.

The lids with the new injection points for parts 221-4x2 and 221-4x5 will be released starting in the first quarter of 2026.

As described in point 1, there will be some mixing of the old and new versions over the next few years.

Please feel free to contact us for further information.

Sincerely,

WAGO GmbH & Co. KG
